

Charles River Laboratories (US) is the leading player in the microbiome sequencing services market. CRL provides superior, flexible, and tailored solutions through its comprehensive portfolio of drug discovery and research models and services. The company has been focusing on organic and inorganic growth through expansions and partnerships. For instance, CRL partnered with Fios Genomics Ltd. (UK) to gain access to its bioinformatics solutions, helping CRL to develop a full spectrum of microbiome profiling/analysis services. In addition, the strong reach of CRL's microbial detection product, Accugenix, is contributing to the company's dominant position in the market.

Eurofins Scientific (France) is a leading player in the global microbiome sequencing services market. The company's strong focus on a broad range of customers, technology-enabled solutions, investments in joint ventures and partnerships, and comprehensive microbiome sequencing solutions and processes are factors contributing to the growth of the company's market share. The company provides drug discovery and development services to more than 220,000 customers, including managed care organizations (MCOs), biopharmaceutical companies, governmental agencies, physicians, hospitals and health systems, food & nutritional companies, and independent clinical laboratories.

11.4 REVENUE SHARE ANALYSIS OF TOP MARKET PLAYERS

The revenue analysis was calculated based on the performance of major players during the past few years and the current years in the microbiome sequencing services market. This gave an estimation of the overall market size, structure, and recent advancements in service technologies. Leading players, such as Charles River Laboratories (US), Eurofins Scientific (France), and BGI (China), influence the microbiome sequencing services market due to their vast services portfolios, recent acquisitions, and wide distribution & sales networks across the globe.

FIGURE 30 REVENUE SHARE ANALYSIS OF TOP PLAYERS IN MICROBIOME SEQUENCING SERVICES MARKET, 2020-2022

Notes: The segmental revenue for the top three players have been considered. The segmental share of microbiome sequencing services may vary significantly from company to company, depending on individual company portfolios.

11.5 COMPANY EVALUATION QUADRANT

The company evaluation quadrant provides information on the top 20 players offering microbiome sequencing services and outlines findings on the performance of each vendor. The industry matrix evaluations are based on two broad categories—Service Offerings and Business Strategies. Each type carries various criteria based on which the companies have been evaluated. The evaluation criteria considered under service offerings include the breadth of offerings, services launched, service technologies, and support. The evaluation criteria considered under the business strategy includes reach (based on market and geographic presence), industry coverage (based on end users catered to), viability, and inorganic growth strategies. The top 20 companies are placed into four categories based on their performance in each criterion—“Stars,” “Emerging Leaders,” “Pervasive Players,” and “Participants.”

We have evaluated 20 companies in this section, which include Charles River Laboratories (US), Eurofins Scientific (France), BGI (China), CosmosID (US), Microba (Australia), QIAGEN (Germany), Microbiome Insights (Canada), BaseClear (Netherlands), CD Genomics (US), Zymo Research (US), OraSure Technologies (US), MR DNA (US), Eremid Genomic Services (US), Clinical-Microbiomics A/S (Denmark), Novogene Co., Ltd. (China), EzBiome (US), Boster Biological Technology (US), Zifo (India), omics2view.consulting GbR (Germany), and MacroGen, Inc. (South Korea).

11.5.1 STARS

Players who fall into this category receive high scores for most evaluation criteria. They have a strong and established product portfolio, high market shares, comprehensive application coverage, and a strong geographical footprint. These players provide mature, innovative, and reputable microbiome sequencing services. Charles River Laboratories (US), Eurofins Scientific (France), BGI (China), CosmosID (US), Microba (Australia), and QIAGEN (Germany) are the star players in this market.

11.5.2 EMERGING LEADERS

Emerging leaders have demonstrated substantial product innovations compared to their competitors (resulting in an evolved service portfolio) and significant market presence. However, they do not have robust growth strategies for geographical penetration and overall business growth. Microbiome Insights (Canada), BaseClear (Netherlands), CD Genomics (US), Zymo Research (US), and OraSure Technologies (US) are emerging leaders in the market.

11.5.3 PERVASIVE PLAYERS

Companies falling in this quadrant are established players with very strong business strategies and global distribution/product availability. However, they have a weaker service portfolio and lower market share than the emerging leaders. Pervasive players are Clinical-Microbiomics A/S (Denmark) and Novogene Co., Ltd. (China).

11.5.4 PARTICIPANTS

The companies that fall in this category have niche service offerings. They do not have substantial business strategies as compared to other established vendors. These companies could be new entrants and require more time before getting traction. Participants in the microbiome sequencing services market include MR DNA (US), Eremid Genomic Services (US), Clinical-Microbiomics A/S (Denmark), EzBiome (US), Boster Biological Technology (US), Zifo (India), omics2view.consulting GbR (Germany), and MacroGen, Inc. (South Korea).
