

11.5 COMPANY EVALUATION QUADRANT

The company evaluation quadrant provides information on the top 20 players offering microbiome sequencing services and outlines findings on the performance of each vendor. The industry matrix evaluations are based on two broad categories—Service Offerings and Business Strategies. Each type carries various criteria based on which the companies have been evaluated. The evaluation criteria considered under service offerings include the breadth of offerings, services launched, service technologies, and support. The evaluation criteria considered under the business strategy includes reach (based on market and geographic presence), industry coverage (based on end users catered to), viability, and inorganic growth strategies. The top 20 companies are placed into four categories based on their performance in each criterion—“Stars,” “Emerging Leaders,” “Pervasive Players,” and “Participants.”

We have evaluated 20 companies in this section, which include Charles River Laboratories (US), Eurofins Scientific (France), BGI (China), CosmosID (US), Microba (Australia), QIAGEN (Germany), Microbiome Insights (Canada), BaseClear (Netherlands), CD Genomics (US), Zymo Research (US), OraSure Technologies (US), MR DNA (US), Eremid Genomic Services (US), Clinical-Microbiomics A/S (Denmark), Novogene Co., Ltd. (China), EzBiome (US), Boster Biological Technology (US), Zifo (India), omics2view.consulting GbR (Germany), and MacroGen, Inc. (South Korea).

11.5.1 STARS

Players who fall into this category receive high scores for most evaluation criteria. They have a strong and established product portfolio, high market shares, comprehensive application coverage, and a strong geographical footprint. These players provide mature, innovative, and reputable microbiome sequencing services. Charles River Laboratories (US), Eurofins Scientific (France), BGI (China), CosmosID (US), Microba (Australia), and QIAGEN (Germany) are the star players in this market.

11.5.2 EMERGING LEADERS

Emerging leaders have demonstrated substantial product innovations compared to their competitors (resulting in an evolved service portfolio) and significant market presence. However, they do not have robust growth strategies for geographical penetration and overall business growth. Microbiome Insights (Canada), BaseClear (Netherlands), CD Genomics (US), Zymo Research (US), and OraSure Technologies (US) are emerging leaders in the market.

11.5.3 PERVASIVE PLAYERS

Companies falling in this quadrant are established players with very strong business strategies and global distribution/product availability. However, they have a weaker service portfolio and lower market share than the emerging leaders. Pervasive players are Clinical-Microbiomics A/S (Denmark) and Novogene Co., Ltd. (China).

11.5.4 PARTICIPANTS

The companies that fall in this category have niche service offerings. They do not have substantial business strategies as compared to other established vendors. These companies could be new entrants and require more time before getting traction. Participants in the microbiome sequencing services market include MR DNA (US), Eremid Genomic Services (US), Clinical-Microbiomics A/S (Denmark), EzBiome (US), Boster Biological Technology (US), Zifo (India), omics2view.consulting GbR (Germany), and MacroGen, Inc. (South Korea).

11.6 COMPETITIVE SCENARIO

TABLE 170 SERVICE LAUNCHES

MONTH & YEAR	COMPANY NAME	SERVICE	DESCRIPTION
March 2023	Microba (Australia)	Metagenomic sequencing and analysis	Microba launched a new human gut microbiome testing service for comprehensive gastrointestinal testing solutions. The solutions are accessible to healthcare professionals in Australia through a different brand name, Co-Biome.
January 2023	CosmosID (US)	CosmosID Metabolomics Service	The company launched its metabolomics services designed to offer support for multi-omics microbiome research. The service consists of a combination of Liquid Chromatography–Mass Spectrometry (LC-MS) and Gas Chromatography–Mass Spectroscopy (GC-MS).
March 2022	OraSure Technologies (US)	Metatranscriptomic sequencing and analysis	Diversigen announced the launch of a new service, metatranscriptomic sequencing and analysis of the gut microbiome. This service will assist research professionals in understanding gene expression while gaining insights into both function and mechanism of microbiomes in samples.

TABLE 171 DEALS

MONTH & YEAR	DEAL TYPE	COMPANY 1	COMPANY 2	DESCRIPTION	DEAL SIZE
February 2023	Partnership	CosmosID (US)	Locus Biosciences (US)	Locus Biosciences announced a long-term partnership with CosmosID to gain the support of the latter for clinical trial studies. CosmosID's support for microbiome analysis is expected to assist Locus Biosciences in strengthening its precision therapeutics platform.	NA
June 2021	Partnership	Microba (Australia)	Illumina, Inc. (US)	Microba announced a partnership with Illumina to advance research activities in human gut microbiome health and disease. The partnership is expected to combine NGS tools provided by Illumina with Microba's proprietary analysis platform to develop accurate metagenomic databases.	NA
